

Hangar 19 (H19) is an advanced engineering firm specialising in sustainable technologies based in Billericay serving clients internationally.

Smart projects we deliver include; electric vehicle charge point infrastructure, smart transport platforms including mobility as a service, traffic flow and people flow monitoring, air quality and flood monitoring systems.

H19 also specialises in energy control, grid load management and energy storage management.

Hubeleon is H19's proprietary software platform which delivers the above solutions. Visit [www.hangar-19.com](http://www.hangar-19.com) for more details.

### For the TALE project

- As a starting point, being a technology solution provider, we can work as consultant with the TALE team to help the client understand or articulate a problem area in the business. Then recommend a technology and data solution which will help overcome that problem in the form of consultancy report, which they can use in the procurement and implementation stages.
- Secondly, we can assist, if the TALE client is looking for a software solution provider to develop a bespoke data dashboard or need help customising an “off the shelf” software solution to their specific needs. We are specialists in data integration from multiple sources and presenting them in a strategic, simple and bespoke way to suit the client needs.
- Finally, we could provide a FREE fleet audit on the distribution / delivery division of the business and advise on electrification of the fleet. This has immediate cost benefits for the business which includes accessing OLEV grants and reducing CO2 emissions. Hangar 19 can fully assist the business in this process.
